

WELCOME TO ARBORIA

A luminarium that one enters to be immersed in light

Since 1992 Architects of Air's luminaria have enchanted over 3 million visitors in 41 countries around the world.

The luminosity of colour inside ARBORIA is simply due to the light shining through coloured plastic – plastic whose individual pieces have been cut & glued together by hand in our workshop in Nottingham, England.

Once inside please take your time and walk slowly. Keep to the paths that are in contact with the ground as the plastic is delicate. There are pods where you may sit down or lay back to absorb the ambience.

ARBORIA's theme of 'trees' is revealed in ways to be discovered. The structures inside show the inspiration of Gothic cathedrals and Islamic architecture – all governed by the principles of pneumatic structures.

ARBORIA's sound is of the Ecuadorian Cloud Forest, recorded there for biodiversity monitoring by musician & soundscape ecologist, Alice Eldridge (ecila.org).
